# Bespoke fitted joinery & handmade kitchens for exceptional homes

A capabilities overview for architects, interior designers, builders and private clients. Designed, made and installed from our Suffolk workshop for homes in London, the Home Counties and East Anglia.

## WHO WE ARE

# Furniture-quality joinery, made to last a lifetime

Reeve & Co Interiors is a Suffolk workshop making bespoke fitted joinery and handmade kitchens for high-end homes. We design, draw, make and install — keeping the whole process under one roof so quality is controlled from the first drawing to the final fit.

We work directly with private clients and, for the majority of our work, alongside the architects, interior designers and main contractors delivering design-led projects across London, the Home Counties and East Anglia. Our clients value uniqueness, craftsmanship and reliable, on-time delivery — and they want spaces and pieces that nobody else has.

Our reputation rests on three things: the quality of our cabinetry and detailing; our ability to work to drawings; and our problem-solving when a project calls for something unusual.

<b>Based</b>	Suffolk workshop, near Stowmarket
<b>We serve</b>	London · Home Counties · East Anglia
<b>Project values</b>	From ~£5,000 to ~£1,200,000
<b>How we work</b>	Design, make & install in-house

## WHAT WE MAKE

# A complete joinery and cabinetry capability

From a single statement staircase to a whole-house package of joinery, every commission is made to measure and installed by our own team.

### **Bespoke kitchens**

In-frame and contemporary kitchens, islands, larders and pantries.

---

### **Fitted libraries & studies**

Floor-to-ceiling bookcases, panelled studies and home offices.

---

### **Wardrobes & dressing rooms**

Fitted wardrobes and dressing rooms with considered internals.

---

### **Wall panelling**

Traditional and contemporary panelling that sets the tone of a room.

---

### **Staircases**

Timber and metal staircases as architectural centrepieces.

---

### **Boot rooms & utilities**

Hard-wearing, generous storage for family and country homes.

---

### **Media & display joinery**

Concealed AV, display cabinetry and integrated lighting.

---

### **Whole-house joinery**

Coordinated schemes in a single, considered language.

---

### **Restoration joinery**

Sympathetic repair and matched replacement for period homes.

---

### **Metalwork & fabrication**

Bespoke steel and mixed-material work alongside our joinery.

---

## HOW WE WORK

# One team, from first drawing to final fit

### 01 Design & drawings

We develop the design in 3D CAD, working through every elevation with you or your design team before anything is made.

### 02 Survey

A measured site survey ensures everything fits the building precisely — essential in period and existing homes.

### 03 Make

Components are made in our Suffolk workshop, combining CNC precision with hand craftsmanship.

### 04 Finish

Hand-applied paint and polish, quality ironmongery and integrated lighting, in controlled conditions.

### 05 Install

Our own team installs the work, scribing to the building and protecting the finish.

## Working with architects & designers

Most of our work comes through the trade, and we understand what design teams need: accurate delivery to drawings, reliable timescales, discreet conduct on site, and the confidence that an unusual detail will be solved rather than refused. We are happy to be credited and linked on your project pages.

SELECTED PROJECTS

# A selection of recent work

Sloane Square — Chelsea

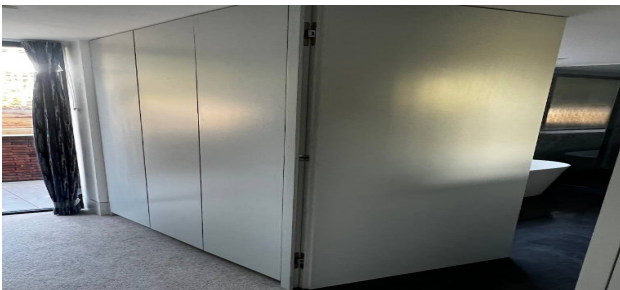

Westminster — London

Kent — country house

Tuddenham — country house

Bury St Edmunds

Hemmingford Park

*Full case studies, with photography, are on [reeveandco.com](http://reeveandco.com).*

## MATERIALS & SUSTAINABILITY

# Made well, made to last

We select timber and veneers for grain, stability and longevity, building on solid framing and well-made carcasses with quality ironmongery throughout. Pieces are made and finished in controlled workshop conditions so they arrive ready to install cleanly alongside other trades.

Sustainability runs through the business: solar panels on the workshop roofs, EV charging, and waste timber used for heating. Building joinery to last for decades — rather than to be replaced — is itself the most sustainable approach we can take.
